

PM Dorin Recean visits a fiberglass mesh manufacturing business in Vulcanesti

Prime Minister Dorin Recean, on a working visit to Vulcanesti, has visited a company specializing in the production of fiberglass mesh, founded and opened in 2011. In 2022, it was purchased by one of the largest producers of such products from Romania.

The PM and company representatives discussed the company's recent achievements, including a significant expansion of production capacity and an increase in the number of employees at a new production hall in Sangera.

They also discussed the company's development plans, which include increasing production in Moldova in the next three years. This project will create over 100 new jobs, in addition to the 190 already provided.

The prime minister underscored the importance of supporting the business environment and attracting new investments for the development of Free Economic Zones in Moldova.

“Terra Impex is a concrete example of foreign investment which transforms the local business environment, creates jobs for citizens in the region and contributes to economic development,” Dorin Recean said.

Terra Impex manufactures fiberglass mesh used for thermal insulation of buildings. The products are exported to the European Union. Currently, the company's annual production is 25-30 million square meters of mesh.
